WHAT'S NEW!

The key change in this release of **Bunifu DataViz** is in the Product Management section which will be discussed later in the section: **Navigating the New Bunifu Framework Manager**.

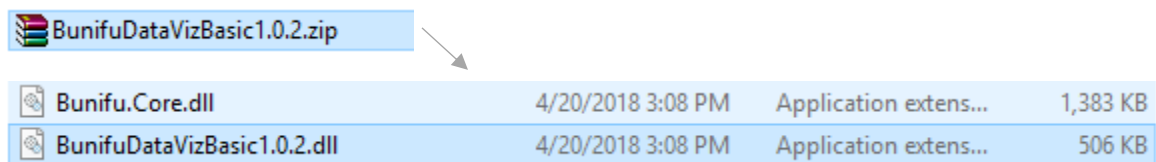

INSTALLATION

This section provides a detailed step-by-step guide on the installation process of Bunifu DataViz.

Whether you've purchased the **Basic** or the **Advanced** DataViz product, the installation and usage process is equally the same.

1. BASIC

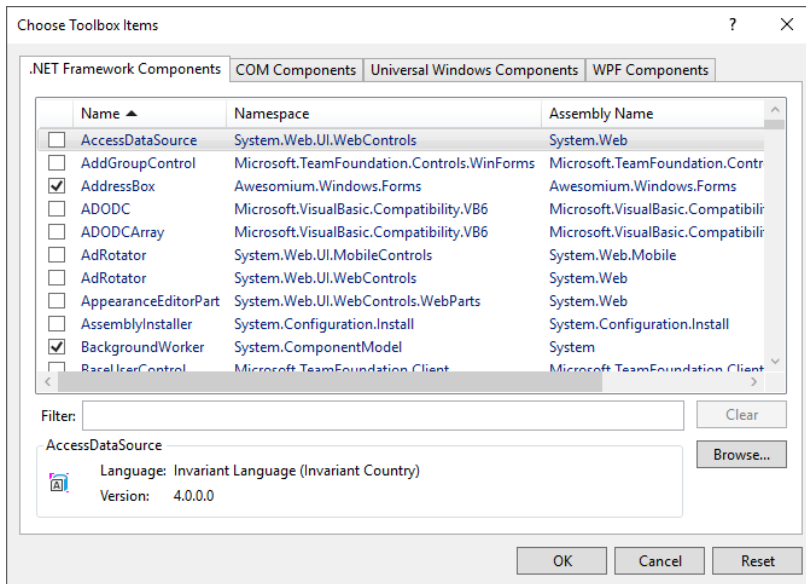

Once you've purchased Bunifu DataViz Basic and downloaded it from your email address, you'll then extract it as it comes packaged in .zip format:

From there, proceed to launching Visual Studio and loading/creating a new VB.NET/C# project.

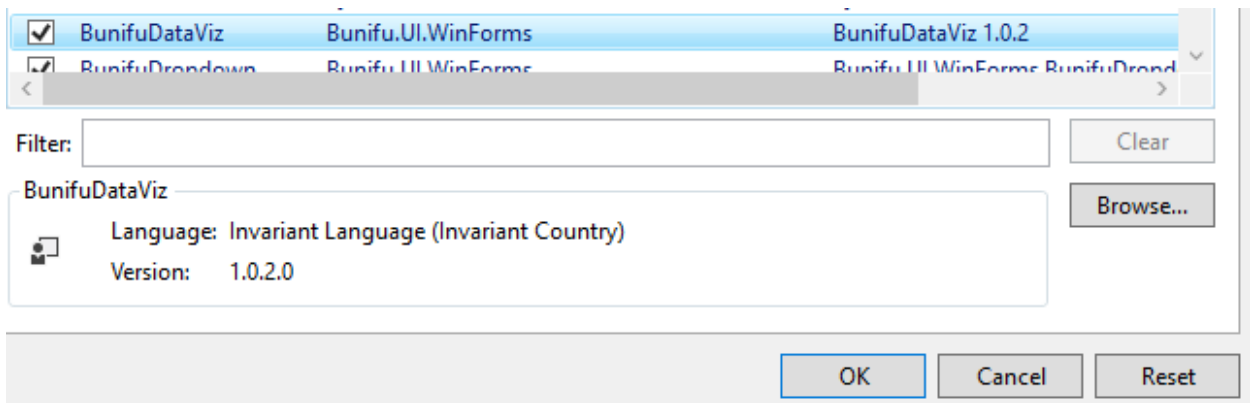

Once done, open any Form in order to activate Visual Studio's *Toolbox* tab, right-click on it and select *Add Tab*; this will create a new tab and allow you to provide a name for it – you can name it **Bunifu DataViz Basic**.

Within the same tab we've created, right-click on it and select *Choose Items...* A dialog will pop-up with a list of tabs and a *Browse...* button down below it:

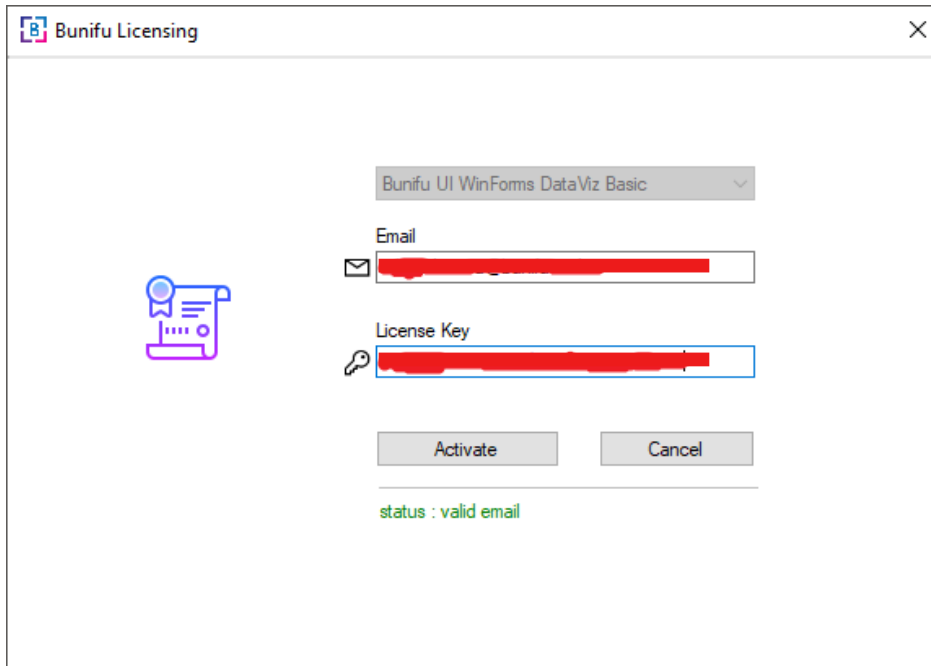

Click the *Browse...* button and navigate to the folder where Bunifu DataViz Basic was downloaded; for most users this is in their **Downloads** folder.

Once you've navigated to the folder you extracted, select the dll library **BunifuDataVizBasic1.0.2.dll** and then click *Open*; you'll see the library added and checked in the *Choose Toolbox Items* dialog. Finally, click on *Okay* to add the library to the Toolbox:

You can then select the control from your Toolbox and drag it onto your form just like any other control.

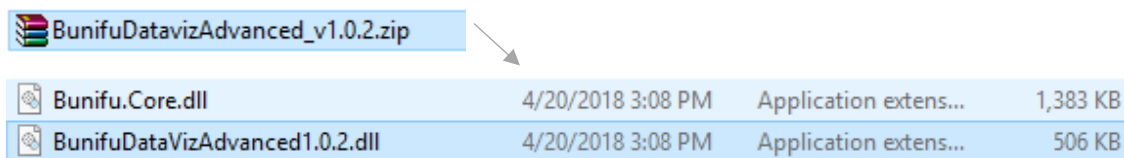

Once done, you'll be prompted for your **license information** before proceeding; ensure that you provide the details and then continue from there on.

Likewise, please don't hesitate to visit the [Docs](#) section of our site and get started on using the *Basic* product.

2. ADVANCED

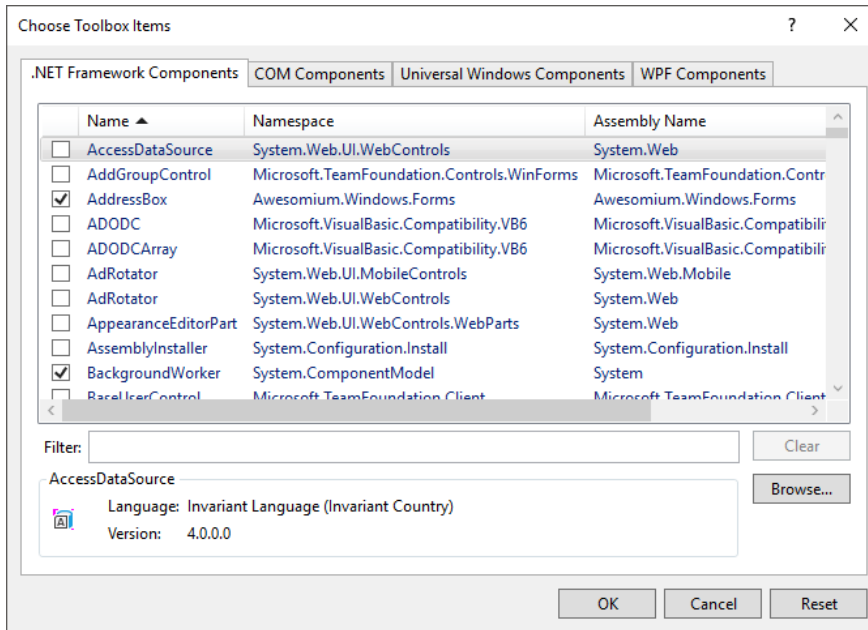

Once you've purchased **Bunifu DataViz Advanced** and downloaded it from your email address, you'll then extract it as it comes packaged in *.zip* format:

From there, proceed to launching Visual Studio and loading/creating a new VB.NET/C# project.

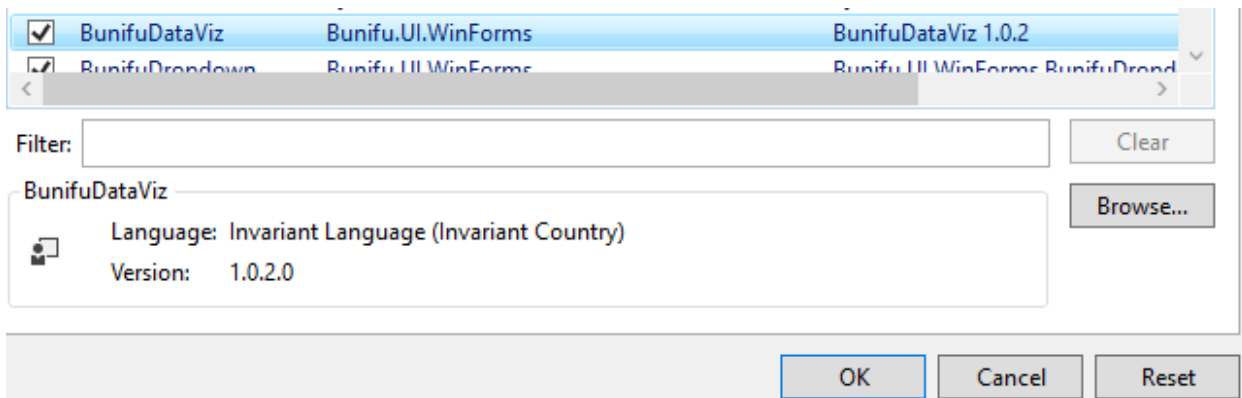

Once done, open any Form in order to activate Visual Studio's *Toolbox* tab, right-click on it and select *Add Tab*; this will create a new tab and allow you to provide a name for it – you can name it **Bunifu DataViz Advanced**.

Within the same tab we've created, right-click on it and select *Choose Items...* A dialog will pop-up with a list of tabs and a *Browse...* button down below it:

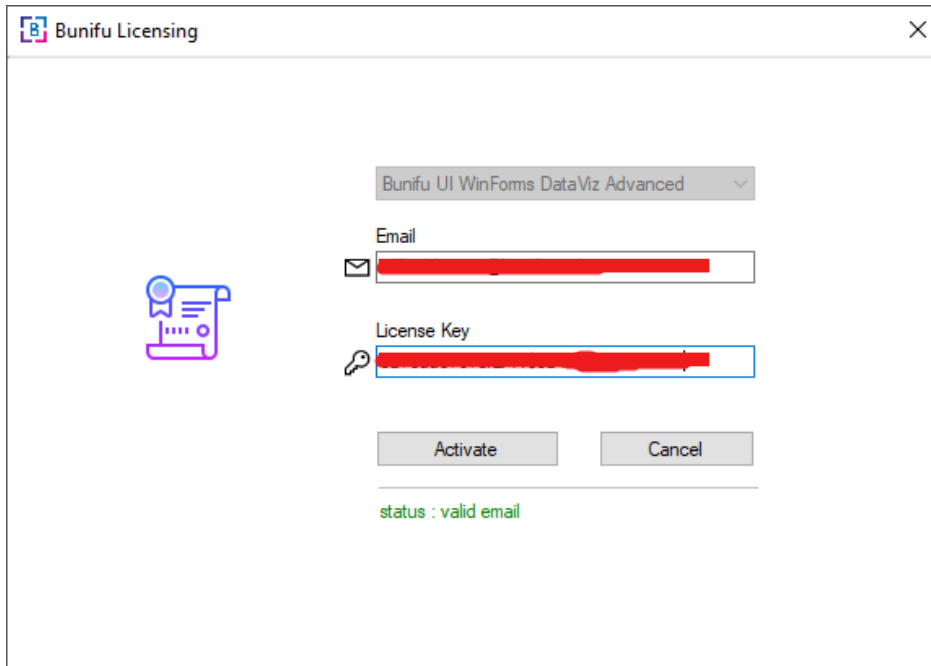

Click the *Browse...* button and navigate to the folder where Bunifu DataViz Advanced was downloaded; for most users this is in their **Downloads** folder.

Once you've navigated to the folder you extracted, select the dll library **BunifuDataVizAdvanced1.0.2.dll** and then click *Open*; you'll see the library added and checked in the *Choose Toolbox Items* dialog. Finally, click on *Okay* to add the library to the Toolbox:

You can then select the control from your Toolbox and drag it onto your form just like any other control.

Once done, you'll be prompted for your **license information** before proceeding; ensure that you provide the details and then continue from there on.

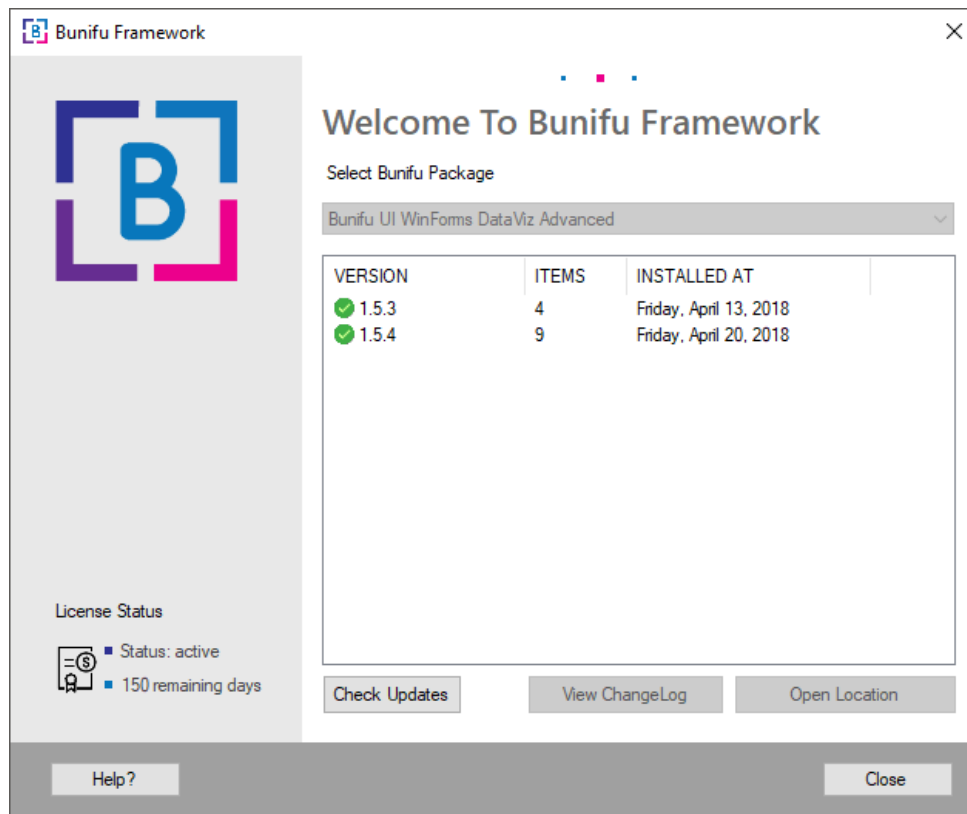

The image shows a 'Bunifu Licensing' dialog box. At the top left is the Bunifu logo and the title 'Bunifu Licensing'. At the top right is a close button (X). On the left side, there is a purple icon of a document with a magnifying glass. On the right side, there is a dropdown menu showing 'Bunifu UI WinForms DataViz Advanced'. Below this are two input fields: 'Email' and 'License Key'. Both fields contain redacted text. Below the input fields are two buttons: 'Activate' and 'Cancel'. At the bottom, there is a status message: 'status : valid email'.

Please don't hesitate to visit the [Docs](#) section of our site and get started on using the *Advanced* product.

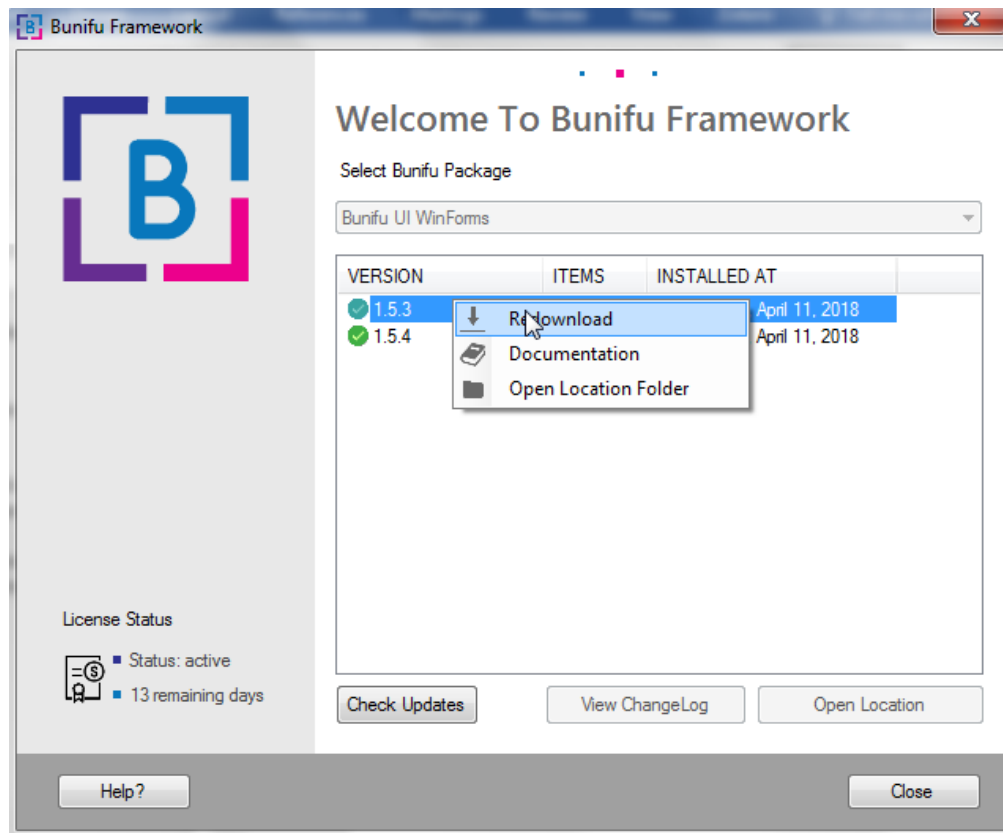

NAVIGATING THE NEW BUNIFU FRAMEWORK MANAGER

The redesigned **Bunifu Framework Manager** – *more design updates coming your way:*

The Framework Manager will always notify you on new control-updates and their *changelogs*; you will also be informed about your *license* status right beside the main window pane.

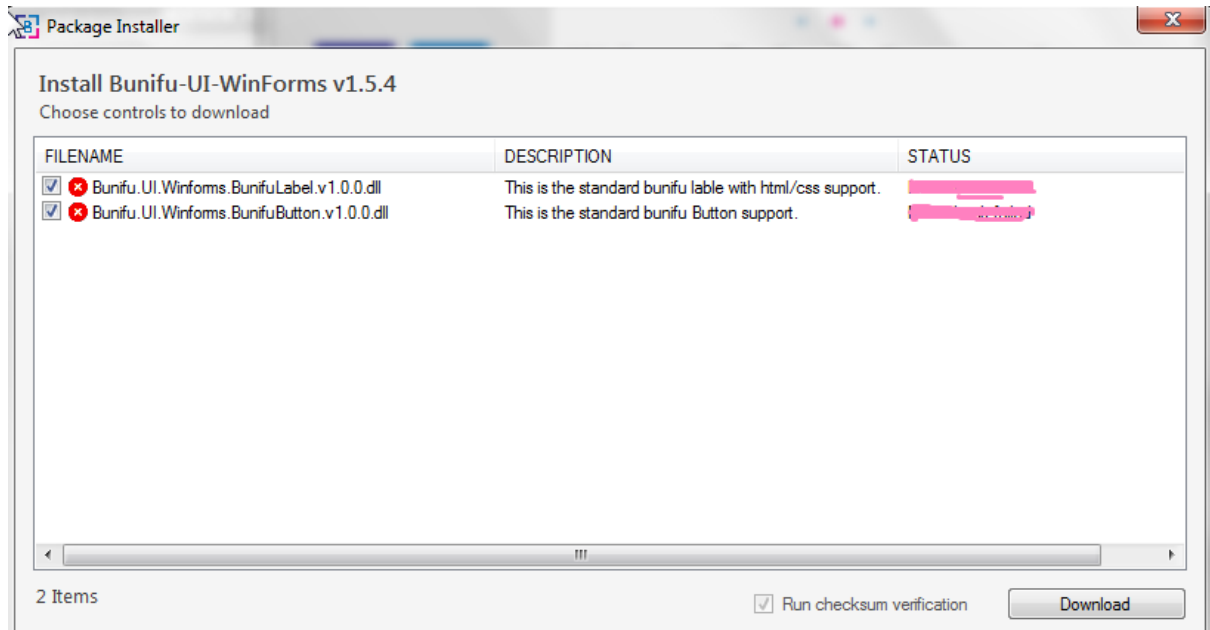

Different versions that have been installed can be selected and viewed/updated:

You can choose to *Re-download* that particular control, view its *Documentation* or *Open the Location Folder* where the controls have been saved in-order to import them into Visual Studio.

CHECKING FOR UPDATES

Click on the **Check Updates** button. Once updates are found, a package installer dialog pops-up:

Then click the **Download** button to proceed with your download. Once the download is complete, ensure that you've imported the controls to Visual Studio's Toolbox.

Once all these is done, you may proceed to using Bunifu UI.

Happy coding!
